

CODE OF PRACTICE
FOR
FIRE RESISTING CONSTRUCTION

1 9 9 6

BUILDING AUTHORITY

HONG KONG

FOREWORD

Fire safety in a building is determined by a number of factors one of which is its ability to resist the effects of fire and to minimize the spread of fire and smoke. Requirements for fire resisting construction for buildings are laid down in Part XV of the Building (Construction) Regulations. This Code of Practice provides guidance on compliance with these requirements.

This Code will be reviewed regularly. Suggestions for improving it are welcome.
